

App Name

Quick Quiz App

Problem the App Solve

This app helps people practice questions in a clear and organized way. Sometimes students desire a simple way to check how much they know and how well they understand a subject. This program fixes that by presenting quiz questions, validating the answers, and showing the final score.

Target Users

This software is meant for students and anybody who want to practice answering quiz questions. Anyone who desires a simple way to study can utilize it.

What the App Does

The Quick Quiz App will provide a window with multiple-choice questions for the user to answer. The person using it will pick an answer for each question. The program will check to see if the response is right or wrong, keep track of the score, and present the overall result at the end. The software can employ arrays, object-oriented design, user input, GUI output, making decisions, and loops.

How the App will be used

The user will first open the app and start the quiz. The app will then show one question at a time with possible answers. After that, the user will choose an answer. The app will then check the answer and go on to the next question. This will keep happening until all the questions are addressed. The app will show the user's final score in the end.

Example Scenarios

For instance, a student uses the Quick Quiz App to work on science problems. The app displays the first question and four possible answers. The program checks to see if the solution the learner chose is right. The software maintains track of the score and goes through all the questions. The app shows the user the final score after the quiz is finished.
